Common, yet dangerous, misconfigurations can put cloud services like object storage, virtual networks, firewalls, and Identity and Access Management (IAM) at risk.

Detecting problems in IaC helps teams move faster and avoid making dangerous mistakes. The IaC Pack lets you catch configuration issues in your Terraform files early, so that these potential entry points never make it into production.

Misconfigurations are the #1 reason for cloud data breaches

Common, yet dangerous, misconfigurations can put cloud services like object storage, virtual networks, firewalls, and Identity and Access Management (IAM) at risk.

Detecting problems in IaC helps teams move faster and avoid making dangerous mistakes. The IaC Pack lets you catch configuration issues in your Terraform files early, so that these potential entry points never make it into production.
Prioritize Risk & Set Policy for IaC

Just as we would for an open source vulnerability, we provide deep insights into the severity and root cause of cloud infrastructure misconfigurations. Your team can understand the risks, determine which issues to address first, and set policy based on the severity of the violation.

Cloud and Open Source Security Together in One Place

Infrastructure violations are shown in the Nexus Lifecycle report alongside open source vulnerabilities, allowing developers to find and fix both application and infrastructure issues early in the development process.

Clearly Defined Rules, Compliance, & Remediation

We give developers remediation guidance to fix violations by leveraging new cloud infrastructure and compliance data, while also pinpointing specific compliance issues.

The IaC Pack is built on the most comprehensive set of rules and compliance mappings, with out-of-the-box support for Center for Internet Security (CIS) Foundations Benchmarks, CIS Docker Benchmarks, CIS Controls, GDPR, HIPAA, ISO 27001, NIST 800-53, PCI, CSA Cloud Controls Matrix, and SOC 2.

Sonatype

Sonatype is the leader in developer-friendly, full-spectrum software supply chain management providing organizations total control of their cloud-native development lifecycles, including third-party open source code, first-party source code, Infrastructure as code, and containerized code. The company supports 70% of the Fortune 100 and its commercial and open source tools are trusted by 15 million developers around the world. With a vision to transform the way the world innovates, Sonatype helps organizations of all sizes build higher quality software that's more aligned with business needs, more maintainable, and more secure.

Sonatype has been recognized by Fast Company as one of the Best Workplaces for Innovators in the world, two years in a row and has been named to the Deloitte Technology Fast 500 and Inc. 5000 list for the past five years. For more information, please visit Sonatype.com or connect with us on Facebook, Twitter, or LinkedIn.
